CyberSphere Learning Management System (LMS) is a fully customized and affordable learning solution based on the Moodle platform and is designed to take e-learning and blended learning to a new level by embracing the 4 principles of Knowledge Management – Acquire, Aggregate, Assimilate and Amplify.
For Institutes and Organizations with a keen focus on learning, CyberSphere is the ideal solution with its **outcomes-based and collaborative learning features** in a highly customizable system. With Moodle at its core, CyberSphere is a platform which provides continuous developments to meet the ever changing needs of learning environment.

With the powerful and versatile Moodle LMS at its core, CyberSphere can be easily deployed across institutes and enterprises and it is an indispensable tool for adult learners and trainers offering the flexibility of open standard systems and creating a robust and secure learning environment.

Moreover, CyberSphere with its offers advance learning features such as Collaborative Learning Environment based on Social Constructivism, Knowledge Repository, Configurable Reporting and support for a variety of 3rd party plugins.

**What’s new in CyberSphere 2.0?**

CyberSphere 2.0 now rests on the latest and the most stable Moodle 2.3 version. With a host of new and unmatched features that support learning-on-the go, students and lecturers can look forward to a vibrant and exciting learning environment.
CyberSphere is a custom distribution of Moodle designed to meet the needs of IHL and Adult Learning institutes. CyberSphere can be configured to meet your requirement for different set of users such as External Users and Internal Users. Each user group can see different content and have a different look and feel.

CyberSphere follows a 3 layer architecture which sets a strong and excellent foundation and follows good practices of low coupling and high cohesion, which the other systems fail to achieve. This yields a system that is simple, flexible and effective.
